

**SLAB Plates for Shock Absorption** and Vibration Damping

# **Designed to Absorb Shock Loads and Insulate Vibrations for...**

Machine Tools, Textile Machinery, Crane Rails, Hydraulic Crushers, Presses/Stamping Machines, Air-Conditioning & Ventilating Machines and More

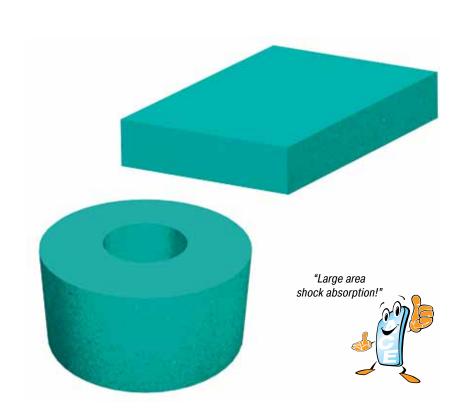

### **SLAB SL-030 to SL-300**

Damping Plates for Shock Absorption

**SLAB damping plates** of the **SL-030**, **SL-100 and SL-300 series** are visco-elastic PUR materials that are manufactured according to a patented formula and which were especially designed to absorb shock loads. At the same time, the resulting structure-borne noise is effectively reduced. This material is characterized by its very high inner damping. The rebound elasticity is around < 30 % (Tolerance +/-10%). The result makes this product an alternative to hydraulic end-of-travel damping, if the load doesn't need to be stopped accurately and the energy doesn't have to be reduced by 100%.

The densities of SL-030 = 270 kg/m<sup>3</sup>, SL-100 = 500 kg/m<sup>3</sup> and SL-300 = 800 kg/m<sup>3</sup> cover a wide spectrum of the energy absorption to the applied area. This enables a relatively independent choice of applied area.

Impact velocity range: max.5 m/s

Compression set:  $\leqslant$  5%, at 50% of compression, 23 °C, 70 h, 30 min after unloading, according to EN ISO 1856

**Environment:** Resistant against ozone and UV radiation (also see chemical resistancy page 18)

Material: Mixed cellular PUR-Elastomer (polyether urethane), standard color green

Standard density: 270 kg/m<sup>3</sup>, 500 kg/m<sup>3</sup> and 800 kg/m<sup>3</sup>

Impact resilience: < 30%, tolerance +/- 10%, SL-030 and SL-100 according to DIN 53573, SL-300 according to DIN 53512 (measurement following the respective standard ).

Fire rating: B2, normally flammable according to DIN 4102

**Operating temperature range:** -30 °C to +50 °C, short-term higher temperature possible.

**Delivery form:** Thickness: 12.5 mm and 25 mm. Rolls: 1.5 m wide, 5.0 m long. Strips: Up to the maximum width and length. Other dimensions (also thickness), colors, shapes and cut-out parts on request.

**Possibilities for cutting:** Water jet cutting, stamping, splitting, sawing, drilling etc.

**Mounting style:** Bonding (see adhesive recommendation page 17), clamps, screws, etc.

**On request:** Available with compact polyurethane wearing surface, shore hardness: 82 shore Sh A.

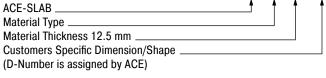

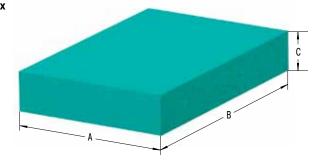

#### **Ordering Example**

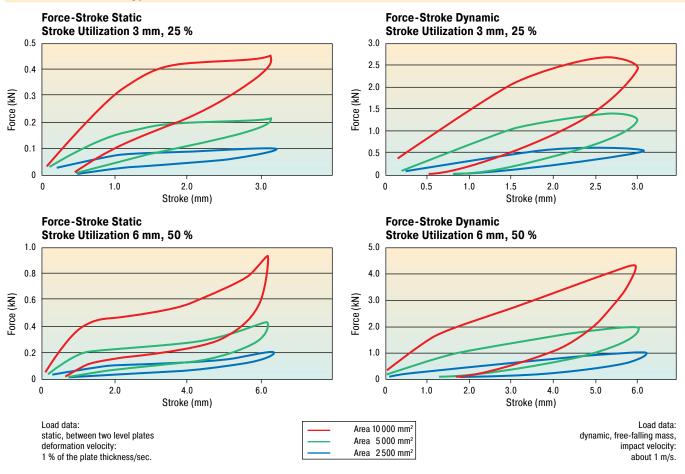

SL-030-12-Dxxxx

The chosen damping plate should be tested by the customer on the specific application.

### **SLAB Damping Plates for Shock Absorption**

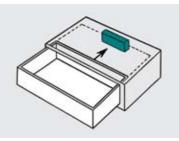

Application Examples

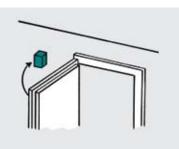

**Damping in between Pallets** 

Impact Buffer for Slats, Beams, etc.

**Drawer Damping** 

Door Stopper, i.e., for Glass Doors

**Funnel Tube Lining at Assembly Lines** 

Feed Hopper Lining at Graded Sorter

#### ACE-SLAB damping plates protect man and machine.

At the beginning of the construction phase of a modern processing center at the end position, a 25 kg cable channel collided with force against the housing and produced a deafening noise and mechanical strain on the energy chain. A reliable solution for compliance with the operational parameters was realized with the **SL-030-25-Dxxxx** type ACE-SLAB damping plates even before the milling machine was finished.

Low-noise energy chain

ACE-SLAB damping plates make tire transport safer.

Developed for absorbing the impact of forces, the ACE-SLAB damping plates **SL-030-121-Dxxxx** applied in this tire testing system are ideal for protecting the sliding parts of the machine during quality tests.

The individual customisation of the ring form of the center arm and simple integration into the equipment also support the decision for applying these innovative absorber elements.

Impact reduction in ring form

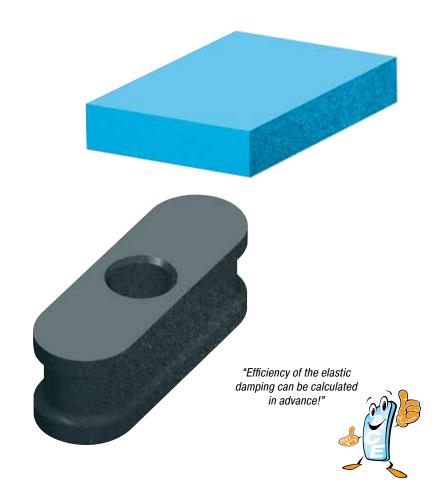

**SLAB damping plates** of the **SL-170 to SL-720** are universally applicable elastic PUR materials that are manufactured according to a patented formula and which are used throughout industry. The standard densities of 170 kg/m<sup>3</sup> to 720 kg/m<sup>3</sup> serve as vibration insulation in a wide variety of applications. For specific applications, special designs with specific densities can be manufactured. The static and dynamic product characteristics are precisely defined. The effectiveness of elastic suspension can be calculated in advance. The necessary parameters are shown on a respective checklist.

The static load capacity of standard materials are in the range of:

SL-170: 0 to 0.011 N/mm<sup>2</sup> SL-210: 0 to 0.028 N/mm<sup>2</sup> SL-275: 0 to 0.055 N/mm<sup>2</sup> SL-450: 0 to 0.15 N/mm<sup>2</sup> SL-600: 0 to 0.30 N/mm<sup>2</sup> SL-720: 0 to 0.50 N/mm<sup>2</sup>

and for special designs up to 0.8 N/mm<sup>2</sup>. Unusual and light loads can withstand forces of 5.0 N/mm<sup>2</sup>. This value can reach up to 6 N/mm<sup>2</sup> for special designs.

**Compression set:**  $\leq$  5 %, at 50 % of compression, 23 °C, 70 h, 30 min after unloading, according to EN ISO 1856

**Environment:** Resistant against ozone and UV radiation (also see chemical resistancy page 18).

Material: Mixed cellular PUR-Elastomer (polyether urethane)

Standard density: 170 kg/m<sup>3</sup>, 210 kg/m<sup>3</sup>, 275 kg/m<sup>3</sup>, 450 kg/m<sup>3</sup>, 600 kg/m<sup>3</sup>, 720 kg/m<sup>3</sup>, special designs on request.

Fire rating: B2, normally flammable according to DIN 4102

**Operating temperature range:** -30 °C to +70 °C, short-term higher temperature possible.

**Delivery form:** Thickness: 12.5 mm and 25 mm. Rolls: 1.5 m wide, 5.0 m long. Strips: Up to the maximum width and length. Other dimensions (also thickness), colors, shapes and cut-out parts on request.

**Possibilities for cutting:** Water jet cutting, stamping, splitting, sawing, drilling etc.

**Mounting style:** Bonding (see adhesive recommendation page 17), clamps, screws, etc.

**On request:** Available with compact polyurethane wearing surface, shore hardness: 82 shore Sh A.

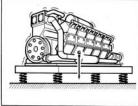

### **SLAB Vibration Damping Plates** General Product Description and Design Guidelines

# Even load distribution of vibration damping elements are illustrated using the example of a combustion engine

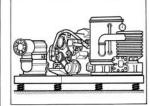

Pay attention to center of gravity

Maximize the bearing's torsional stiffness

Merging of assembly groups (combined elastic bearing)

Use large flex resistant base

plates or machine frames

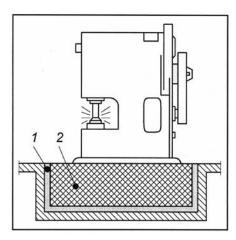

# Mounting of individual equipment components illustrated using the example of a pump

Pay attention to separate flexible mounts of connected equipment components

- Pay attention to flexible base plates or machine frames

#### Full surface mounted eccentric press

- sufficient base size
- modeling
- · assure vibration insulation
- static view: center of gravity, deflection
- maximize torsional stiffness
- dynamic view: forces, torques, amplitude

1 Vibration damping 2 Concrete base

Source: SUVA, Elastic Bearing of Machines

Machines generate vibrations which are transmitted to the surroundings. They can influence the manufacturing process of other machines and thereby the quality of the products.

Vibrations disrupt the location and the environment and cause damage to buildings. SLAB polyurethane elastomer is a material that effectively reduces vibration and structure-borne noise. Depending on the requirements, SLABs are available in different densities, thicknesses and dimensions.

SLAB damping plates are used to insulate vibrations for:

- Machine tools
- Textile machinery
- Air conditioning and ventilating machines
- Crane rails
- Hydraulic crushers
- Presses / stamping machines etc.

Potential for direct bearing support on SLAB damping plates:

Vibration Damping Plates Dynamic Load 0 to 0.75 N/mm<sup>2</sup>

SL-720-12-Fxxxx

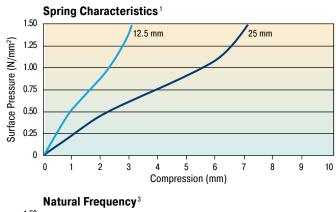

#### **Ordering Example**

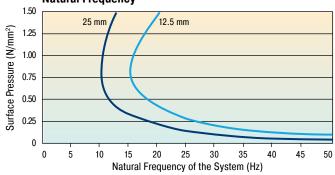

ACE-SLAB	t t	<b>†</b> 4
Material Type		
Material Thickness 12.5 mm		
Customers Specific Dimension/Shape		
(F-Number is assigned by ACE)		

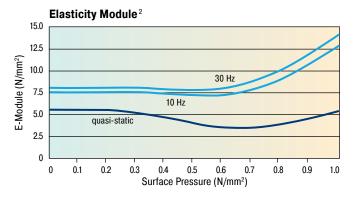

#### **Recommendation for Elastic Bearing**

Static application range (static loads):	0 to 0.50 N/mm <sup>2</sup>
Dynamic range (static and dynamic loads):	0 to 0.75 N/mm <sup>2</sup>
Peak loads (rare, brief loads):	up to 5.0 N/mm <sup>2</sup>

#### **Characteristics**

- $^1$  Quasi-static spring characteristic with a load speed of 0.05 N/mm²/s Tests between the level and plane-parallel steel plates, recording the 3rd load, testing at room temperature, form factor q=3
- $^2$  Load-dependence of static and dynamic E-modules Quasi-static E-module as a tangent module from the spring characteristic. Dynamic E-module from the sinus-shaped stimulation with a vibration wave of 100 dBv re.  $5\cdot 10^{-8}$  m/s (corresponding with a vibration width of 0.22 mm at 10 Hz and 0.08 mm at 30 Hz). Measurement based on DIN 53513, form factor q = 3
- $^3\,$  Natural frequencies of a vibration-capable system with a degree of freedom, consisting of a rigid mass and an elastic bearing made of SL-720 on a rigid base, form factor q = 3

#### **Technical Data**

**Characteristics:** Elastic PUR material with spring/absorber properties **Delivery form:** Thickness: 12.5 mm and 25 mm. Rolls: 1.5 m wide and 5.0 m long. Strips: max. 1.5 m wide, 5 m long. Other dimensions (also thickness), colors, shapes and cut-out parts upon request.

Material: Mixed-cell polyetherurethane Standard color: Black

#### **Physical Characteristics**

		Test Procedure	Comment
Density	720 kg/m <sup>3</sup>		
Mechanical loss factor	η = 0.12	DIN 53513*	dependent on frequency, load and amplitude
Impact resilience	60 %	DIN 53512	
Static modulus of rigidity	1 N/mm <sup>2</sup>	DIN ISO 1827*	with preload of 0.50 N/mm <sup>2</sup>
Dynamic modulus of rigidity	1.5 N/mm <sup>2</sup>	DIN ISO 1827*	with preload of 0.50 N/mm <sup>2</sup> , 10 Hz
Tensile strength	3 N/mm <sup>2</sup>	EN ISO 527-3/5/100*	minimum value
Elongation at break	300 %	EN ISO 527-3/5/100*	minimum value
Friction value (steel)	μ <sub>S</sub> = 0.5		dry
Friction value (concrete)	$\mu_{\rm B} = 0.7$		dry
Abrasion	350 mm <sup>3</sup>	DIN 53516	10 N load, lower membrane

### **Bonding of Polyurethane (PUR) Elastomers**

Cellular and compact parts of polyurethane (PUR) elastomers SLAB damping plates can be bonded according to the following recommendations. If treatment instructions are followed, the strengths of the bonded joint can be equivalent to the elastomer material itself.

#### 1. General Information

To achieve the required bonding strength it is necessary to ensure the correct adhesive is chosen for each individual application.

**Contact bonding material:** Thin adhesive film, with little filling of the gaps. Correcting or moving of the areas covered with bonding material is no longer possible after the first contact is made (contact effect).

Once a bonding is separated, the bonding process must be renewed.

Please note that creases, ripples or blisters cannot be straightened once the contact is made.

**Hardening bonding material:** (As thin as possible) the film of glue fills the joint. The gluing can be done after the edges are brought together.

#### 2. Preparation

The preparation of bonding surfaces is of significant importance for the bonding strength. The surfaces must be adapted to each other and available in plain, clean form.

**Careful removal of:** Adhesive remnants, oil, fat, separating agents, dirt, dust, scales, molding layers, protective coating, finish, paint, sweat etc.

**Mechanical support:** Stripping, brushing, scraping, grinding, sandblasting.

**Chemical support:** Degreasing (washing off with grease remover), etching, priming; pay attention to chemical resistancy on page 18.

In general, SLAB damping plates in sheet form can be bonded without pretreatment. Molded parts, with or without special skin, have to be cleaned from left-over separating agents, if necessary by grinding. When bonding with other materials like plastic, wood, metal or concrete, mechanical and/or chemical additives have to be used.

The adhesive has to be prepared according to the formula, observing the manufacturer's recommendations. The adhesive film is also to be carefully applied pursuant to these details. (Tools: brush, spatula, adhesive spreader, airless spray gun).

**Contact bonding material:** Apply the non-gap-filling adhesive film to both bonding surfaces – the thinner, the better. To close the pores of low density materials, two layers may be necessary.

Hardening bonding material: Apply evenly. Possible irregularities can be compensated by the film thickness.

#### 3. Bonding

When using contact bonding material, the flash off time has to be kept in mind. Especially, with systems containing water instead of usual solvents, the adhesive film must be as dry as possible in order to pass the 'finger test' – no marks appear when touching the adhesive surface. When using hardening bonding material, the parts have to be joined immediately after applying the bonding material.

#### 4. Pressing

Contact bonding material: Contact pressure up to 0.5 N/mm<sup>2</sup> Hardening bonding material: Fix firmly

It is important to carefully follow the manufacturer's instructions with regard to processing temperature, hardening time and earliest possible loading.

#### 5. Selection of Approved Bonding Materials

For additional information on the variety of materials that can be bonded together as well as the numerous suitable bonding agents, please refer to the information available from Sika Corporation.

### **SLAB Damping Plates**

### Chemical Resistance and Sample Sets

#### Test (following DIN 53428)

Exposure time of the medium: 6 weeks at room temperature, but for concentrated acids and bases as well as solvents: 7 days at room temperature

#### **Evaluation Criteria**

Changing of tensile strength and elongation of break (dry samples), change in volume

#### **Evaluation Standard**

- 1 Excellent resistance, change in characteristics < 10%
- 2 Good resistance, change in characteristics between 10% and 20%
- 3 Conditional resistance, change in characteristics partly above 20%
- 4 Not resistant,

change in characteristics all above 20%

All information is based on our current knowledge and experiences. We reserve the rights for changes towards product refinement.

Inquiry Checklist for Vibration Insulation of Machines

In order to help expedite your application, please fill out the information on this page and forward to the attention of... ACE Applications Engineering at fax number 248-476-2470, or scan and e-mail to shocks@acecontrols.com Please forward available application-related drawings and photographs.

### **1. Description of Application**

a)	Description of your application in key words – the kind of machine/device that needs insulation							
b)	Machine design (possibly data sheet with information about loads, installation drawing)							
с)	Static and dynamic machine loads (do these operate off-center?)							
d)	Mounting with foundation: What dimensions are available? Is sideways support necessary?		gth		, width	mm	n, height	mm
e)	Mounting without foundation: Which machine mount is present (machine stands, U-profile mount. etc.)			ea contact :				mm
f)	Environmental requirements						) 	
g)	Required product life							
h)	Safety element:	yes		no 🗖				

### 2. Physical Dimensions

a) Measurements and weight of the machine	mass kg					
b) Center of gravity	concentric 🔲 excentric 💌 (sketch)					
<ul> <li>C) Operation of the machine, e.g., frequencies or revolutions per minute (exciter frequency) Frequency reduction desired</li> </ul>	Hz1/s1/s					
d) Available area for set up, quantity & size of support joints	length mm, width mm, diameter mm, number of load points					
e) Maximum mounting height of bearing	height mm, tolerance, +/- mm,					
f) Permissible deflection mm,	permissible amplitudes mm,					
g) Is operational reliability/product life of the machine by the elastic bearing?	yes 🔲 no 🗖					
Special requirements:	Quantity/year: Machine type:					
Sender:						
Company	Department					
Address	Name/Pos					
	Telephone Fax					
Internet	E-mail					
primary information required

# ACE Controls Inc., Innovation in Deceleration & Motion Control

For nearly 50 years ACE Controls Inc. has provided deceleration and motion control solutions to meet the application needs of industries such as: automotive, packaging, bottling, defense, RV, machine tool, material handling, theme park, medical, fitness and more.

Headquartered in Farmington Hills, Michigan, ACE is structured with a global customer service network that includes offices and distributors in over 100 cities and 35 countries.

To locate a distributor nearest to your location, please visit the ACE Controls web site at www.acecontrols.com or contact ACE direct at e-mail: shocks@acecontrols.com
